Calvert County Citizens Encouraged to Use Generators Wisely *County Offers Safety Tips*

PRINCE FREDERICK, Md. – Oct. 28, 2012 – The Calvert County Board of County Commissioners is urging that people who own generators use them properly and safely during power outages.

Generator Safety:

Do not connect your generator directly to your home's wiring:

- Connecting a portable electric generator directly to your household wiring can be deadly to you and others. A generator that is directly connected to your home's wiring can "backfeed" onto the power lines connected to your home.
- Utility transformers can then "step up" or increase this backfeed to thousands of volts – enough to kill a utility lineman making outage repairs a long way from your house. You could also cause expensive damage to utility equipment and your generator.
- The only safe way to connect a portable electric generator to your existing wiring is to have a licensed electrical contractor install a transfer switch. The transfer switch transfers power from the utility power lines to the power coming from your generator.

Never plug a portable electric generator into a regular household outlet.

- A generator into a regular household outlet can energize "dead" power lines and injure neighbors or utility workers. Connect individual appliances that have their outdoor-rated power cords directly to the receptacle outlet of the generator, or connect these cord-connected appliances to the generator with the appropriate outdoor-rated power cord having a sufficient wire gauge to handle the electrical load.

~ more ~

Do not overload the generator:

- Do not operate more appliances and equipment than the output rating of the generator. Overloading your generator can seriously damage your valuable appliances and electronics. Prioritize your needs. A portable electric generator should be used only when necessary, and only to power essential equipment.

Never use a generator indoors or in an attached garage:

- Just like your automobile, a portable generator uses an internal combustion engine that emits deadly carbon monoxide. Be sure to place the generator where exhaust fumes will not enter the house. Only operate it outdoors in a well-ventilated, dry area, away from air intakes to the home, and protected from direct exposure to rain and snow, preferably under a canopy, open shed or carport.

Use the proper power cords:

- Plug individual appliances into the generator using heavy-duty, outdoor-rated cords with a wire gauge adequate for the appliance load. Overloaded cords can cause fires or equipment damage. Do not use extension cords with exposed wires or worn shielding. Make sure the cords from the generator do not present a tripping hazard. Do not run cords under rugs where heat might build up or cord damage may go unnoticed.

Read and adhere to the manufacturer's instructions for safe operation:

- Carefully read and observe all instructions in your portable electric generator's owner manual.

Use proper grounding:

- To prevent electrical shock, make sure your generator is properly grounded. Consult your manufacturer's manual for correct grounding procedures.

Do not store fuel indoors or try to refuel a generator while it is running:

- Gasoline (and other flammable liquids) should be stored outside of living areas in properly labeled, non-glass safety containers. They should not be stored in a garage if a fuel-burning appliance is in the garage. The vapor from gasoline can travel invisibly along the ground and be ignited by pilot lights or electric arcs caused by turning on the lights. Avoid spilling fuel on hot components. Put out all flames or cigarettes when handling gasoline. Always have a fully charged, approved fire extinguisher located near the generator. Never attempt to refuel a portable generator while it is running.

Shut the generator down properly:

- Turn off all equipment powered by the generator before shutting down your generator.

Avoid getting burned:

- Many generator parts are hot enough to burn you during operation.

Keep children away:

- Children are naturally curious. Keep them away from portable electric generators at all times to avoid injury.

The county has established rumor control numbers and can be reached at 410-535-0396 or 410-535-0314. These lines will be staffed until the immediate event passes. During regular business hours (Monday through Friday, 8:30 a.m. to 4:30 p.m.), call 410-535-1600, ext. 2638. Questions or requests for information can also be sent by email to oem@co.cal.md.us. Visit the Calvert County Government website at www.co.cal.md.us for updates.

Further hurricane preparedness information is available through the Maryland Emergency Management Agency online at www.mema.state.md.us. For the most up-to-date forecasts on the track of Hurricane Sandy, visit the National Weather Service at www.weather.gov.

###

Calvert County is Maryland's smallest county in land area with 213 square miles. It is home to nearly 90,000 people and has one of the highest standards of living in Maryland. Major industries include defense contracting, information technology, tourism, energy, advanced manufacturing and administrative services.
